## CSWC Operational Period Summary

### 1800 February 12 2018 to 0600 February 13 2018

San Pedro is a community within the city of Los Angeles. Formerly a separate city, it consolidated with Los Angeles in 1909. The Port of Los Angeles is partially located within San Pedro. The district has grown from being dominated by the fishing industry to become primarily a working class community within the city of Los Angeles.

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

The Pacific trough responsible for the unsettled weather will slowly sink southward during the next 24 hours. Gusty N-NE and E winds will affect the Northern California region, specifically the Sacramento Valley, west slopes of the Cascade and Sierra ranges as well as the higher mountain peaks found to the west of the Valley. The main wind period will lessen by Tuesday afternoon. Humidity will be marginally low at times with upper teens and 20s. The driest conditions will occur Tuesday.

Another Pacific trough will pass over the region Wednesday/Thursday. This system looks to be a drier one with lighter amounts of precipitation across the far north. A weaker bout of N-NE and eventually E winds should occur following that system passage.

Strong ridging should develop just off the west coast late week but flatten sometime during the weekend and last into early next week. Some precipitation may impact northern portions of the region during this period but significant amounts are not likely.

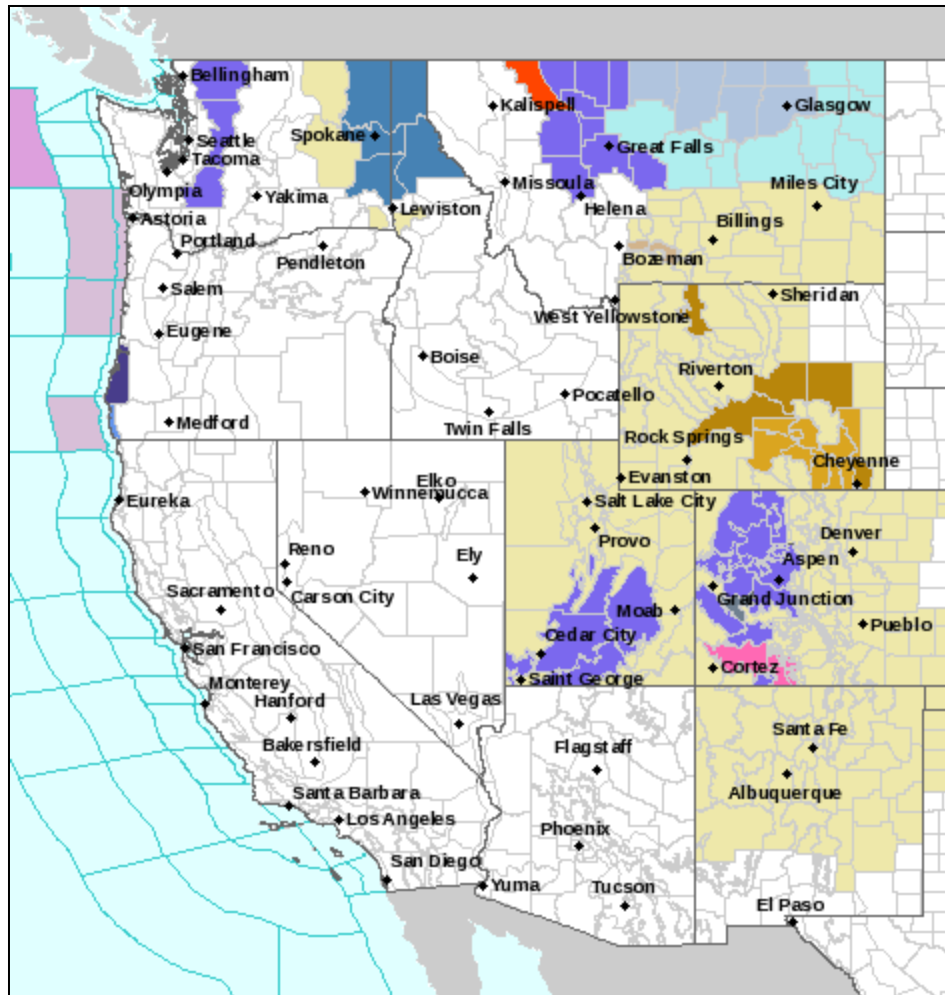

Confidence in the above forecast is pretty solid in terms of drier than normal conditions and periods of stronger northerly winds. Timing may be a bit suspect, especially for the weekend period.

## **SOUTHERN CALIFORNIA**

An area of low pressure currently over Nevada will bring scattered showers with less than a half inch of rainfall to the region through Wednesday night. The snow level will be around 5,000 feet. Temperatures will be a little below normal through Wednesday, with upper 30s and 40s across the mountains and mid 50s to mid 60s in the valleys. The low pressure area will move off to the east and a ridge of high pressure will build into California from the Pacific Ocean bringing significant warming and low humidity to the region Thursday and Friday. Northeast winds of 20 to 30 mph with gusts to 50 mph will surface across the mountains and below the canyons and passes of Southern California Thursday morning through Friday afternoon. A Pacific trough will drop down the West Coast bringing cooling and increasing humidity to the area this weekend. There will be strong westerly winds over the mountains and deserts Saturday afternoon through Sunday and there will be possible showers moving from north to south on Sunday.
